DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13-14, 16 and 18-20 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by US 6067062 A (062).

Per claim 13, 062 teaches a front plate [17]; a rear plate [7]; a layer of liquid crystals [not numbered] and a TFT array layer [pixel region array], both interposed between the said front and rear plates [see figure 1]; and at least one thermal sensor integral to the TFT array layer to provide temperature sensing of said layer of liquid crystals [see figure 28 and the paragraph bridging columns 20-21].

Per claim 14, see column 20, first full paragraph and figure 27. The figure shows two diodes and specification talks of coupling more.

Per claim 16, the sensors are form at the same time as the TFT used for the pixel array. Thus the sensors are applied onto the TFT layer.

Per claims 18 and 20, see column 30, paragraph beginning with "Fig. 43."

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any

Art Unit: 2871

evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 17 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over 062.

Per claim 17, 062 teaches the temperature sensor circuit can also be packaged in the CMOSIC to provide a temperature sensor circuit having a sensitivity substantially equal to that of the thermistor in the operation at 1.5 V, for example. This temperature sensor circuit can provide temperature sensitivity of -6 mV/.degree.C. for a temperature range of -10.degree. C. to +60.degree. C. and is suited for mass-production because of its excellent linearity and little dispersion. Although 062 does not teach the exact range or overlapping ranges, the MPEP states "[s]imilarly, a prima facie case of obviousness exists where the claimed ranges and prior art ranges do not overlap but are close enough that one skilled in the art would have expected them to have the same properties. Titanium Metals Corp. of America v. Banner, 778 F.2d 775, 227 USPQ 773 (Fed. Cir. 1985) (Court held as proper a rejection of a claim directed to an alloy of "having 0.8% nickel, 0.3% molybdenum, up to 0.1% iron, balance titanium" as obvious over a reference disclosing alloys of 0.75% nickel, 0.25% molybdenum, balance titanium and 0.94% nickel, 0.31% molybdenum, balance titanium.)" Accordingly, it would have been obvious to one of ordinary skill at the time of invention to increase the temperature at which the cell is capable of operating.

Per claim 19, 062 lacks the sensor laying under the EMI layer. However it was well known to form a black matrix on the upper substrate between the color filter for improving contrast. Accordingly, it would have been obvious to one of ordinary skill at the time of invention to incorporate the well known black matrix with 062.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Application/Control Number: 10/769,838

Art Unit: 2871

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this

Response to Arguments

final action.

Applicant's arguments with respect to the pending claims have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James A. Dudek whose telephone number is 571-272-2290. The examiner can normally be reached on 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Nelms can be reached on 571-272-1787. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CAMADA) or 571-272-1000.
